PRAI	JP 1988-197520		19880808		

AB The vibration-damping **Mg alloys** for structural parts are prepd. by inoculating molten Mg with H and 0.1-10% Al, Si, P, Ca, Ti, V, Cr, Mn, Fe, Co, Ni, Cu, Zn, Ga, Ge, Y, Zr, Nb, Mo, As, Cd, In, Sn, Sb, and/or Bi as a solid soln. or hydride. The inoculated **Mg-alloy** melt is cast, and the resulting ingots are forged, rolled, and then heat-treated in flowing H at 90.degree.-solidus temp. The alloy product shows a good vibration damping at .gtoreq.1 kHz.
